For the stout hearted there is a thrilling subterranean adventure at Waitomo, through a network of caves magically lit up by thousands of glittering glow worms.

Another popular trip is a day long cruise along the magnificent Bay of Islands which brings tourists close to the rich marine life of the country. One can watch dolphins do acrobatics here. At Queenstown one can indulge in jet boating, white water rafting, gondola rides and more. #### A SENSATIONAL MIGRATION

Barely one year old, an Arctic fox has likely set a record for its species, trekking more than 3,500 kilometres from Norway to Canada in just 76 days. The fox's great adventure started in Spitsbergen, a large island in Norway's Svalbard archipelago, on March 26, 2018. Norwegian researchers followed the young female fox, fitted with a tracking device, as it travelled across masses of sea ice at an uncanny rate of speed. The fox clocked 1,512 kilometres in 21 days and arrived in Greenland on April 16. Her journey brought her to Ellesmere Island, Nunavut, in time for Canada Day on July 1, 2018.

The researchers believe the Arctic fox's journey is one of the longest ever recorded. The results left scientists wide-eyed — and skeptical. "We first did not believe it was true," researcher Eva Fuglei said. "We just had to keep up with what the fox did."

The route the fox took over 76 days from Norway to Canada is depicted on this map. Fuglei said she thought maybe the fox had died or made its way onto a boat, causing the satellite data to seem skewed. But "there are no boats in that area" deep in the ice, Fuglei said. Their article said the Arctic fox species has "exceptional mobility and endurance," especially in polar environments, and that while migration was expected, it was her speed of travel that astonished them. Roaming across icy terrain, the fox moved an average of 46.3 kilometres per day. The most it travelled in a single day was 155 kilometres across an ice sheet in Greenland.

It did, however, slow down on two occasions — travelling less than 10 kilometres per day — possibly due to tough land, weather or hunting opportunities, the scientists said. The fox likely survived on "marine food resources," like seabirds, before settling on Ellesmere Island. There, she feasted on lemmings, a small Arctic rodent.

As for why the little fox made the trip, scientists have no easy answer. The ice was "crucial" for the fox to take the spanning journey, according to researchers, which raises concerns about what may happen to the species as sea ice melts and patterns change. Norway's climate and environment minister pointed the finger at climate change. "This is another example of how important sea ice is to wildlife in the Arctic," Ola Elvestuen told the institute. "The warming in the north is frighteningly fast. We must cut emissions quickly to prevent the sea ice from disappearing all summer."

The Arctic has shown consistent and steady warming and ice melt over the years. While the study of ice melt in the Arctic is ongoing, the tracking of this particular fox stopped short this year. The satellite transmitter attached to the young fox stopped working in February. (Source – Wikipedia)

Q3. Read the passage given below and answer the questions that follow:

Most students groan when they hear their teachers assigning homework. When I was a kid I do not like having homework because it took up my playing and television time. But studies have shown that homework is important for the students because it can create good study habits and positive attitude towards learning as they grow older.

Homework can improve the study habits of a student. This means that the student can create a good time management at home. By having a homework, the students will then have to schedule their time so that they can still do other home activities that they want to do.

Homework can also make the students remember and make them understand more clearly the lessons that they are taking up at school.

These are just the main reasons why homework is important for the students. It is an attitude and good habit building exercise for the students. Homework can also make the parents get involved with the education of their kids. If you are a parent then you have to encourage your kids to pay attention to their homework and manage their time to finish it early. The 18th century, Germany was divided into a number of states. Prussia was most powerful, dominated by big landlords known as Junkers. Nationalist feelings were widespread among middle class Germans who had tried to unite the different regions of the German federation into a nation-state governed by an elected Parliament. In May 1848, a large number of political associations came together to vote for an all-German National Assembly. Their representatives met at Frankfurt and the Frankfurt Assembly proposed the unification of Germany as a constitutional monarchy under the King of Prussia as emperor. The King of Prussia rejected the offer and the liberal initiative of nation building was repressed by the combined forces of the monarchy, the military and the ‘Junkers’. Then on, Prussia under its Chief Minister Otto von In Bismarck led the movement for unification of Germany. Bismarck carried out this process with the help of the Prussian army and the bureaucracy. He fought three wars over seven years with Denmark, Austria and France. Prussia was victorious in all these wars and the process of unification was completed as a result of Prussia’s victory over France. Consequently, on 18th January 1871, an assembly comprising of princes of German States, representatives of the army, important Prussian ministers and Bismarck gathered in the Palace of Versailles and proclaimed the Prussian King, Kaiser William, the new German Emperor.
